What is Orienteering?

In orienteering, you use a map and compass to find a series of checkpoints shown on a specialized topographic map. You choose the route, either on or off trail, that will help you find all the checkpoints and get back to the finish line in the shortest amount of time. Each checkpoint, or "control," is a distinctly mapped feature such as a trail junction, a boulder, a hilltop, etc. The controls are marked with orange-and-white flags.

Orienteering is often called "the thinking sport" because it requires map reading, problem solving, and quick decision-making in addition to athletic ability and general physical fitness. Courses typically take one to two hours to complete.

How does it work?

In heated competition, the goal is to complete the course in the shortest possible time. However, orienteering can also be enjoyed as a casual walk in the woods, either alone or in a group. RMOC's events typically attract families, kids, and scout troops in addition to competitive orienteers and professional adventure racers.

While running speed is important in orienteering, so is the ability to read a map and associate it with the terrain while making quick decisions on the move. A fast runner can be outperformed by a slower runner (or even a walker) who has better map reading skills.

How do I get started?

Simply show up at a meet or contact one of the contacts listed in this brochure. Almost all of RMOC's events offer basic instruction and courses suitable for beginners; no previous experience is necessary. Loaner compasses are available at the registration table at each meet.

About RMOC

RMOC is a 501(c)(3) non-profit group dedicated to the development and promotion of orienteering in Colorado.
